Introducing the Onstream Media Services...that feature a highly secure Digital Asset Management service, coupled with a powerful set of web-based communications tools, that are designed to more effectively manage, create and distribute content.

Onstream's Digital Media Services Platform™ includes:

Smart Indexing and Encoding

Onstream's platform alleviates the traditional time consuming digitizing and logging processes. Onstream's automatic index processing and meta tagging allows for instantly searchable content. Users can assign all identification tags and easily manage indexing, detection and recognition tools.

Archiving and Retrieval

Onstream provides database and storage management that can easily manage any size digital rich media file. Files can be retrieved, reused, edited, shared, leveraged and distributed within or to any organization.

Hosting

Onstream is a web based service allowing customers to get up and running quickly while minimizing initial reliance on internal IT staff and infrastructure. We employ a state-of-the-art data center that is reliable, safe and highly secure. Our managed hosting application offers a wide range of rich media management tools and services that ensure 24x7 reliability and secure access to your Onstream environment with exceptional performance.

Transcoding

As more and more Web-enabled personal devices are connecting to the Internet, Web content needs to be rendered differently for these devices; taking into account their physical and performance constraints, such as screen size, memory size, and connection bandwidth. Onstream's Digital Media Services Platform™ allows it's users to automatically transcode their rich media to formats for efficient delivery to end users.

Content Publishing

Onstream's publishing enables content owners to monetize their media assets through Pay-Per-View and subscription business models, for live or on-demand streaming and downloading scenarios. The e-Commerce capabilities enable content owners and content aggregators to easily create media commerce portals and storefronts (tabbed portals) using a point-and-click interface with no knowledge of web programming.

Pay-Per-View

Onstream's Content Publishing enables point-and-click online transactions and integrated credit card processing, using your own merchant account to provide comprehensive Pay-Per-View features, including:

- Flexible pricing models and business terms
- Limiting the number of plays
- Time period for viewing
- Geographical access
- Recurring billing
- Discount codes
- Video "reprints" for syndication

Webcasting

Onstream Media serves more than 2,000 public and private sector clients globally.

Visual Webcaster

A full featured webcasting application platform allows users to deliver secure, reliable, live and on-demand audio or video web broadcasts to large audiences globally. It's features include:

- Synchronized PowerPoint slides
- Control panels which allows presenters to manage meeting functions behind the scenes.
- Alerts presenter of new attendees
- Interactive polling and Q&A which enables audience participation, confirmation, hand-raising, and moderated questioning and answering sessions
- Scalability-supports unlimited number of attendees
- Translation-conduct meetings in the language of your choice

Web Conferencing

Onstream Media WebConference allows you to do everything you can do in a face to face meeting.

- Improve lead generation
- Increase sales productivity
- Conduct instant presentations
- Reduce travel costs
- Improve internal communications
- Deliver your message more cost-effectively

Media & Entertainment Services—Ednet

Connectivity and Bridging

Onstream Media's Ednet Service provides full production quality stereo audio and video transmission via high speed data circuits between television, motion picture and recording studios. Ednet provides a fully integrated solution comprised of hardware audio and video codecs which digitize, encode, transmit and then decode the signal on the remote end. Ednet enables users to send full quality audio and video all around the world in seconds for real-time operation! Onstream's Ednet bridging service allows incompatible audio and video codecs to communicate with each other.

Studio Access

Studio Access enables our clients to use Onstream's private network, affiliated networks and off-network studios in over 200 cities worldwide for trouble-free, high-speed exchange of high quality audio, compressed video and multimedia data communications. Entertainment industry professionals have used the Onstream Ednet Service for such notable productions such as:

Star Wars, Titanic, Lord of the Rings, Saving Private Ryan, Monster, Ray, The Aviator, The Incredibles and hundreds of others.

Consulting Services

Onstream Media offers an array of professional services to ensure that our customers are successful in their efforts.

- Installation and configuration
- Systems integration
- Custom software development
- Training
